The Morbidity Table includes the number of reportable diseases and conditions reported to the Wake County Department of Health and Human Services by Physicians and laboratory directors as mandated by NC Law. The list of reportable diseases is not comprehensive as rare diseases with zero case reports (e.g. CJD, Leprosy) are not shown.

For a complete list of reportable conditions see: (http://www.epi.state.nc.us/epi/gcdc/manual/reportable_diseases.html)

The Morbidity Table is offered by the Public Health Committee of the Wake County Medical Society.

Notes:

The data presented are based on cases reported in the most current year. (i.e., comparative of previous year may not be comprehensive for cases reported in that year.) If no events were reported for a disease for all three periods, the disease is not listed.

The report is based on the date the case was accepted as ready to report to the CDC by DPH. This date is the one used in the calculation of MMWR week/year.

HIV and AIDS cases that are diagnosed/reported in prisons (state, federal) are excluded from this report so that the totals (for Wake County)

match those published in our quarterly surveillance report. Incomplete reports are not included

Starting 3rd Qtr 2010, table includes suspect cases for tick borne diseases and Malaria not previously displayed and Bacterial STD cases as reported through NC EDSS.
